

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION I
J.F. KENNEDY FEDERAL BUILDING, BOSTON, MA 02203-2211

MEMORANDUM

DATE: August 30, 1993

SUBJ: Draft Site Inspection Comments
Bristol Company
Waterbury, Connecticut
TDD No. 9105-83-AWS
CERCLIS No. CTD981898406

FROM: Jane Anderson
CT Site Assessment Manager

TO: Jocelyn Boesch
Roy F. Weston, Inc.

SDMS DocID 583397

I have reviewed the report and offer the following comments.

Pg 5, par 3 - Would it be more appropriate to state that "... WESTON/ARCS noted an area of soil in the vicinity of the former tank location..." Because it was a UST, one would not expect to see stained surface soil.

Pg 9, par 4 - Change Normal to Norman.

Pg 11, par 4 - I would revise the statement "... to achieve TCE concentrations below the EPA standard of 5.0 ppb." As such, it reads that EPA has a soil cleanup standard for TCE, which it does not. DEP probably used their drinking water action level for TCE as the goal for achieving cleanup.

Pg 11, par 6 - State when the confirmatory samples were collected from the excavation. 1,100 and 1,600 cu yd do not add up to 2,500.

Table 2 - The Years of Disposal column can be completed for the wastewater discharged to the river.

Pg 21, par 1 - State from what reference point the ground water depths were measured.

Pg 23, par 2 - State the total depths of the wells.

Pg 27, par 3 - Delete the last sentence.

Please state whether any attempt was made to locate the former production well in order to sample it.
